

REMEMBER A HEALTHY NETWORK IS A **HAPPY NETWORK!**

Get your Network Health Check now!

Don't accept poor
performance as normal.

Our Network Health Check helps you to detect the causes of poor performance and potential threats to your Local Area Network (LAN). Our dedicated and knowledgeable engineers will test and evaluate the performance of your network and provide an assessment highlighting key issues along with recommendations for improvement specifically for your school.

STEP BY STEP...

**THINK
AHEAD**

We'll find out the following in advance

- How many networks are being used
- What is the connection speed
- Your support site traffic over the past month
- Any issues logged by your Firewall
- Any previous or existing support site cases

Then we'll come and see you

- We'll find and inspect all your network cabinets for issues
- Identify your switch makes and models
- Perform a scan of the LAN to identify any issues
- Attempt access to all switches to check they are all up to scratch
- Identify usage levels and highlight near capacity problems
- Identify any potentially dangerous power situations
- Identify other networking hardware such as WiFi and VoIP kit
- Take a general look at network sockets around the school
(identifying labelling issues on the LAN)
- Run speed tests in various locations around the school

We'll let you know the results and make recommendations for improvements
