- Play pre-recorded audio, music or make live announcements
- Works with your pre-existing PA system
- Set messages to play at regular intervals
- Control via a dedicated management webpage
- Installation by an Atomwide engineer available
- Support is included as part of your VoIP Contract

School-wide announcements from your desk phone!

Senior Leadership Team and staff members can call a dedicated phone number from their VoIP phone, to make either live spoken announcements from the user's own handset, or play one of up to eight pre-configured audio files such as spoken announcements or music. Pre-recorded files are triggered by dialling a specific extension on the users phone handset and selecting the appropriate option, including one that creates a 'straight-through' connection to the PA system enabling, for instance, an impromptu Head Teacher's announcement to be initiated from their own desk phone.

It comprises a small, unobtrusive server than can be installed next to a PA system or other amplifier. The server outputs a mono analogue audio signal on a 3.5mm jack, so will typically integrate with any such school PA or audio system with an appropriate audio input.

A management webpage gives school's the ability to configure and control their own settings from within the school.

Installation can be provided by Atomwide during an initial VoIP system install, or as a later addition (POA), or the server device can be installed by school or third party technicians. Support is thereafter included under the school's prevailing VoIP contract.
